Comparability with other data	IX
Lists of geographic units	XI

### GENERAL

This report presents statistics for workers 16 years old and over classified by place of residence and place of work for standard metropolitan statistical areas (SMSA's) of 250,000 or more and their constituent parts. The statistics are based on the 1970 Census of Population. Legal provision for this census, which was conducted as of April 1, 1970, was made in the Act of Congress of August 31, 1954 (amended August 1957), which codified Title 13, United States Code.

A major portion of the information compiled from the 1970 Census of Population appears in Volume I, **Characteristics of the Population**, which focuses on the presentation of data for States, counties, places, and other areas of the United States. The present report is part of Volume II, **Subject Reports**, wherein most reports concentrate on the presentation of national and regional data for a particular subject. A list of Volume II subject reports from the 1970 census is presented on page II. For a description of Volumes I and II, as well as other elements of the data dissemination program of the 1970

Population and Housing Census, see Appendix E, "Publication and Computer Summary Tape Program."

The content and procedures of the 1970 census were determined after evaluation of the results of the 1960 census, consultation with a wide variety of users of census data, and extensive field pretesting. A number of changes were introduced in 1970 to improve the usefulness of the census results. For the characteristics shown in this report, the changes do not, however, affect to any appreciable extent the comparability of the 1970 data with those for 1960.

More detailed information on the technical and procedural matters covered in the text of this report can be obtained by writing to the Director, Bureau of the Census, Washington, D.C. 20233. Such information will also appear in later reports of the 1970 census.

**Organization of the text.**—The text consists of this introduction and Appendixes A through E, which appear after the tables. The introduction contains information relating specifically to the principal subject of this report, such as definitions of terms and a discussion of editing procedures. Appendix A provides general information concerning the presentation of data in this series of reports and the collection and processing procedures of the 1970 census. Appendix B describes the various area classifications (e.g., urban and rural residence, urbanized areas, etc.) and also explains the residence rules used in counting the population. Appendix C provides brief definitions and explanations of subjects covered in cross-classifications in this report and other reports in this series. Appendix D presents information on sources of

error in the data, sampling variability, ratio estimation, and editing procedures. Appendix E summarizes the data dissemination program.

**Content of the tables.**—Table 1 presents data on the workplace of workers who either reside or work in each SMSA of 250,000 or more. The number of workers who commute by private automobile is also shown.

The smallest geographic units for which residence and workplace are presented are as follows:

1. Each central city of an SMSA regardless of size, and each other incorporated place of 50,000 or more. If such a place extends into more than one county, the portion in each county is treated as a separate geographic unit.<sup>1</sup>
2. The remainder of each county containing places included in 1 above. For a list of such counties and the places they contain, see list A at the end of this introduction. In New England certain counties are divided into quasi-counties to give separate treatment to the portions of the county inside and outside individual SMSA's. For a list of these New England counties and quasi-counties, and the places

<sup>1</sup> Exceptions are five places and portions of eight others which were not coded as separate geographic units for workplace data, because their status as places of 50,000 or more in 1970 (or portions of such places) was not known prior to the census. These places are El Monte, Calif., Simi Valley, Calif., Lakewood, Colo., Sterling Heights, Mich., and Bellevue, Wash.; and the portions of Lansing, Mich., in Clinton and Eaton Counties; Jackson, Miss., in Rankin County; Independence, Mo., in Clay County; High Point, N.C., in Randolph County; Portland, Oreg., in Washington County; Fort Worth, Tex., in Johnson County; Houston, Tex., in Fort Bend and Montgomery Counties; and Milwaukee, Wis., in Washington County.

## APPENDIXES

B. Area Classifications	App-3
C. Definitions and Explanations of Subject Characteristics	App-5
D. Accuracy of the Data	App-13
E. Publication and Computer Summary Tape Program	App-20

they contain, see list B at the end of this introduction.

3. Each additional county or county equivalent (not containing any places included in 1 above).

A residence-workplace or workplace-residence interchange of workers may appear for any combination of two of these geographic units, for example, workers living in a given city of 50,000 or more and working in another, or working in a given city and living in the remainder of a county, or living in a county and working in a city, etc. Each pair of geographic units may appear twice, once to give the number of workers residing in the first unit who work in the second, and once to give the number who work in the first and live in the second.

In presenting data for each SMSA of 250,000 or more, table 1 states the commuter interchange for every possible combination of these geographic units within the SMSA boundaries, except in cases where no interchange takes place. Interchanges between the SMSA and geographic units outside it are stated only when they amount to 100 or more workers.

In addition, interchanges among geographic units are summarized in terms of whole counties (except for New England counties) and States (or portions of States within SMSA's). For origins or destinations outside the SMSA, a State is summarized separately when it has an interchange of 100 or more workers with the SMSA; other States are combined in the "elsewhere" category.

For each SMSA over 250,000, the data are further summarized for the total workers living in the SMSA who (a) work in the SMSA, (b) work outside the SMSA, and (c) do not have a workplace reported; and the total

workers working in the SMSA who (d) live in the SMSA, and (e) live outside the SMSA. The totals for (a) and (d) are identical, each representing the number of workers residing in the SMSA who also work there. Following the summarization for each SMSA of 250,000 or more, a parallel summarization is given for each geographic unit within the SMSA.

The limitation to interchanges of 100 or more workers must be kept in mind when interpreting summarized interchanges or "remainder of county" data in table 1. For example, in the presentation of data for the Bridgeport SMSA on page 34 of table 1, 480 workers who live in the SMSA are shown as working in Westchester County, N.Y. Within Westchester County, 137 workers are shown as working in White Plains, and 224 workers as working in "remainder of county." The balance of 119 workers is accounted for by other cities within the county, no one of which has an interchange of as many as 100 workers with this SMSA. It is important to note that "remainder of county" always refers to a specific area, the balance of the county excluding the places that qualify as separate geographic units for the table (specified in lists A and B). Thus, in the example given above, the "remainder of county" is the place of work of only 224 workers and does not include the interchange of 119 additional workers with other component geographic units of the county that are not shown separately.

Table 2 presents information on selected social and economic characteristics of workers for each SMSA of 250,000 or more. Data for residents of each geographic unit of the SMSA are shown by the geographic unit in which they work, by means of separate columns in the table. The

geographic units recognized are the same as in table 1. Even if there are no workers residing in a geographic unit and working in another unit of the SMSA, a column will still appear. In addition, commuters from outside the SMSA are distributed by the geographic unit in which they work. Finally, resident workers who work outside the SMSA are presented in a single residual category, as are resident workers who did not report their place of work.

The two introductory pages of table 2 provide totals for all SMSA's of 250,000 or more. It should be noted that these totals do not include interchanges between the individual SMSA's. For example, of the 2,140,795 workers who work outside their SMSA of residence, a substantial portion travel to work in another SMSA close to the one in which they live. The total number of workers who travel from SMSA's of 250,000 or more to a place of work outside any such SMSA is much smaller, but cannot be determined directly from the data in this report.

**Sample size.**—The statistics presented in this report are based on the 15-percent sample adjusted to represent the total population. An explanation of the ratio estimation procedure and information on the sampling variability associated with the data are contained in Appendix D.

## RELATED MATERIALS

**1970 census reports.**—Statistics on place of work based on the 15-percent sample are presented for the United States, regions, divisions, States, SMSA's, urbanized areas, places of 10,000 or more, and counties in chapter C of the 1970

## INTRODUCTION—Continued

Census of Population, Volume I, **Characteristics of the Population**. Statistics on the social and economic characteristics of workers and their movement between central cities and suburbs are presented for SMSA's of 100,000 or more in chapter D in the same publication. Part 1 of Volume I includes chapters C and D for the United States as a whole; the remaining parts of Volume I are for each State, the District of Columbia, Puerto Rico, and selected outlying areas. Chapters C and D were originally published separately in paper-bound Series PC(1)-C reports, **General Social and Economic Characteristics**, and Series PC(1)-D reports, **Detailed Characteristics**, respectively.

Statistics on place of work are also shown in the reports for census tracts of 241 SMSA's and selected adjacent areas in the 1970 Census of Population and Housing, Series PHC(1), **Census Tracts**.

**Reports from earlier censuses.**—In the 1960 census reports, data on place of work were published in the 1960 Census of Population, Volume II, PC(2)-6B, **Journey to Work**. Information on this subject also appeared in 1960 Census of Population, Volume I, **Characteristics of the Population**, and for census tracts in 1960 Censuses of Population and Housing, Series PHC(1), **Census Tracts**.

**Unpublished data.**—For most of the Volume II reports, statistics in addition to those published in the report are available on a reimbursable basis from computer tape files. For this report, data similar to table 1 are available for all SMSA's and all non-metropolitan counties. Most places of 20,000 or more can also be separately identified. A tabulation is avail-

able for New England that gives data for town of residence by town of work. The data shown for table 2 and some additional characteristics are available for all these areas. In addition, the Bureau of the Census and the Federal Highway Administration of the Department of Transportation have cooperated in an effort to provide local highway and transportation planning agencies with special place-of-work tabulations for traffic zones. These traffic zones are defined in terms of tracts and blocks according to the specifications of the local agencies. Requests for unpublished data, giving a specific description of the figures desired, may be made by writing to the Director, Bureau of the Census, Washington, D.C. 20233. Inquiries concerning unpublished data should be transmitted to the Bureau as soon as possible because tape files are not maintained indefinitely.

### DEFINITIONS AND EXPLANATIONS OF PRINCIPAL SUBJECTS

The definitions and explanations below relate only to the principal subjects of this report. Brief definitions of other items that appear in

cross-classifications in the tables of this report are presented in Appendix C.

### Place of Work

The data on place of work were derived from answers to question 29c (see facsimile of questionnaire item below).

The question was asked of all persons 14 years old and over in the 15-percent sample who reported working during the reference week, i.e., the week prior to enumeration. Place of work refers to the geographic location at which civilians at work during the reference week and Armed Forces personnel (except those on leave, sick, etc.) carried out their occupational or job activities.

In this report tabulations are made for the following geographic units: central cities of SMSA's regardless of size, other cities of 50,000 or more, and counties. In the New England States, SMSA's are composed of cities and towns, and some counties may contain parts of more than one SMSA. These counties are subdivided into the parts associated with each SMSA and the residual nonmetropolitan part.

In 1960, place of work was identified only by county and city. In

#### 29c. Where did he work last week?

*If he worked in more than one place, print where he worked most last week.*

*If he travels about in his work or if the place does not have a numbered address, see instruction sheet.*

- (1) Address (Number and street name) \_\_\_\_\_
- (2) Name of city, town, village, etc. \_\_\_\_\_
- (3) Inside the limits of this city, town, village, etc.?  
☐ Yes  
☐ No
- (4) County \_\_\_\_\_
- (5) State \_\_\_\_\_
- (6) ZIP Code \_\_\_\_\_

1970, for the first time in a decennial census, the exact address (number and street name) for the place of work was asked. Persons working at more than one job were asked to report the location of the job at which they worked the greatest number of hours during the census week. Salesmen, deliverymen, and others who work in several places each week were requested to give the address at which they began work each day, if they reported to a central headquarters. For cases in which daily work was not begun at a central place each day, the person was asked to report the exact address of the place where he worked the most hours during the census week. If his employer operated in more than one location (such as a grocery store chain or public school system), the exact address of the location or branch where the respondent worked was requested. When the number or street name could not be given, the name of the building or the name of the company for which he worked was to be entered.

#### Means of Transportation to Work

The data on means of transportation to work were derived from answers to question 29d (see facsimile of questionnaire item below).

The question was asked of all persons 14 years old and over in the

15-percent sample who reported working during the reference week. Means of transportation to work refers to the chief means of travel or type of conveyance used in traveling to and from work on the last day the respondent worked at the address given in question 29c (place of work). In 1960 the question on means of transportation to work referred to "last week" rather than the "last day."

If more than one means was used, the respondent was instructed to report the one covering the greatest distance. "Worked at home" was to be marked by a person who worked on a farm where he lived or in an office or shop in his home. The category "public transportation" includes bus, streetcar, subway, elevated, and railroad.

#### Uses and Limitations of the Data

The statistics presented in table 1 provide some measure of the degree to which each SMSA shown is a self-contained labor market in terms of the daily pattern of commuting; that is, the degree to which residents of the SMSA work there and workers in the SMSA live there. As such, the data provide some indication of the validity of the particular SMSA definition. The data present the patterns of commuter interchange within the

SMSA and the place of work of those commuting into the various components of the SMSA. In table 2, the data on the social and economic characteristics of these workers make it possible to examine various theoretical formulations as to the characteristics of central city and suburban workers.

Since the level of detail in the geographic breakdown is limited to counties and selected cities, the geographical picture provided of the daily flow of workers is in rather broad terms. For purposes of highway planning and traffic control, in particular, more detailed data are often necessary. However, the socioeconomic and work-trip data provide a good benchmark for the ongoing programs of highway planning, urban planning, and transit planning agencies.

#### Comparability With Other Data

**Other 1970 census reports.**—The data in this report are broadly comparable with the data on place of work published in the PC(1)-C reports and in the census tract reports, PHC(1). However, in both of these series, the place-of-work data refer to all workers 14 years old and over. In this report, as in the PC(1)-D reports, the coverage is of workers 16 years old and over.

Although the data in this report are generally consistent with those on place of work in the PC(1)-D reports, there are two general exceptions. In the PC(1)-D reports, a small number of persons who reported their workplace as abroad but did not specify the country, were classified in the "not reported" category. In table 1 of this report, these persons are included in the category "elsewhere" except when they total 100 or more, in which case

29d. How did he get to work last week? Fill one circle for chief means used on the last day he worked at the address given in 29c.

After completing question 29d, skip to question 33.

they are shown separately as "abroad, not reported."

A larger source of difference results from a processing error discovered in the place-of-work data subsequent to the publication of the PC(1)-D reports. This error, which occurred in the system of allocating workers to a place of work when the information on their workplace was incomplete, affected the following SMSA's: Akron, Ohio; Allentown-Bethlehem-Easton, Pa.-N.J.; Anaheim-Santa Ana-Garden Grove, Calif.; Boston, Mass.; Bridgeport, Conn.; Canton, Ohio; Chicago, Ill.; Cincinnati, Ohio-Ky.-Ind.; Cleveland, Ohio; Dayton, Ohio; Detroit, Mich.; Flint, Mich.; Fort Lauderdale-Hollywood, Fla.; Gary-Hammond-East Chicago, Ind.; Hartford, Conn.; Houston, Tex.; Jersey City, N.J.; Los Angeles-Long Beach, Calif.; Miami, Fla.; New Haven, Conn.; New York, N.Y.; Newark, N.J.; Paterson-Clifton-Passaic, N.J.; Philadelphia, Pa.-N.J.; Pittsburgh, Pa.; Providence-Pawtucket-Warwick, R.I.-Mass.; Reading, Pa.; San Francisco-Oakland, Calif.; San Jose, Calif.;

Springfield-Chicopee-Holyoke, Mass.-Conn.; Trenton, N.J.; Washington, D.C.-Md.-Va.; Wilmington, Del.-N.J.-Md.; and Youngstown-Warren, Ohio. In the present report, these incorrectly allocated workers are all classified in the "place of work not reported" category. In making this correction, certain additional workers were transferred to the "not reported" category as the result of a second processing error. The effect is to increase somewhat the total workers classified in "place of work not reported" for each of these SMSA's, with a corresponding decrease in the number of workers for whom a specific work place is reported, as compared with the data published in previous reports. Of the total workers of the SMSA's affected, about 3.5 percent have been transferred to "not reported." Thus, compared to previous reports, the "not reported" cases have increased from 7.6 percent to 11.1 percent of the workers of these SMSA's. About one percentage point of this increase represents the additional workers transferred in error.

The size of the correction will vary from area to area. Relatively large corrections occur in the New York and Philadelphia SMSA's and also affect the data for New York State and Pennsylvania. In the PC(1)-D report for New York, table 191, the number of New York State residents working in Connecticut was given as 85,422, and the number working in New Jersey was given as 87,600; the figures are approximately 11,700 and 57,800, respectively. In the PC(1)-D report for Pennsylvania, the number of Pennsylvania residents working in New Jersey was given as 88,907; the figure is approximately 64,800.

**Other sources.**—The traditional approach to the collection of data for highway and traffic control planning has been the origin and destination survey. In contrast to the census procedure, such surveys have been based on extremely intensive interviews of relatively small samples of respondents. Generally, the quality of such data is better than census data, but the sampling error is larger.

# INTRODUCTION—Continued

## LIST B. Quasi-Counties, With City and Town Components, by County, in Connecticut, Maine, Massachusetts, New Hampshire, and Rhode Island

(Components in italics are excluded in "remainder" designations. "Part unspecified" is used for workers whose workplace was reported to be in the county but was not reported by city or town and hence could not be assigned to a quasi-county)

State	County	Quasi-county	
		Description	Component
Connecticut	Fairfield	Nonmetropolitan part	Newtown, Redding, Ridgefield, Sherman, Weston
		Part in Bridgeport SMSA	<i>Bridgeport city</i> , Easton, Fairfield, Monroe, Shelton city, Stratford, Trumbull
		Part in Danbury SMSA	<i>Danbury city</i> , Bethel, Brookfield, New Fairfield
		Part in Norwalk SMSA	<i>Norwalk city</i> , Westport, Wilton
		Part in Stamford SMSA	<i>Stamford city</i> , Greenwich, Darien, New Canaan
		Part unspecified	Fairfield County, not further specified
	Hartford	Nonmetropolitan part	Burlington, Hartland, Marlborough
		Part in Bristol SMSA	<i>Bristol city</i>
		Part in Hartford SMSA	<i>Hartford city</i> , Avon, Bloomfield, Canton, East Granby, East Hartford, East Windsor, Enfield, Farmington, Glastonbury, Granby, Manchester, Newington, Rocky Hill, Simsbury, South Windsor, Suffield, West Hartford, Wethersfield, Windsor, Windsor Locks
		Part in New Britain SMSA	<i>New Britain city</i> , Berlin, Plainville, Southington
		Part unspecified	Hartford County, not further specified
	Litchfield	Nonmetropolitan part	Barkhamsted, Bethlehem, Bridgewater, Canaan, Colebrook, Cornwall, Goshen, Harwinton, Kent, Litchfield, Morris, New Hartford, New Milford, Norfolk, North Canaan, Roxbury, Salisbury, Sharon, Torrington city, Warren, Washington, Winchester
		Part in Bristol SMSA	Plymouth
		Part in Waterbury SMSA	Thomaston, Watertown, Woodbury
		Part unspecified	Litchfield County, not further specified
		Nonmetropolitan part	Chester, Clinton, Deep River, Durham, East Haddam, East Hampton, Essex, Haddam, Killingworth, Middlefield, Middletown city, Old Saybrook, Portland, Westbrook
	Middlesex	Part in Hartford SMSA	Cromwell
		Part unspecified	Middlesex County, not further specified
	New Haven	Nonmetropolitan part	Ansonia city, Derby city, Madison, Oxford, Seymour, Southbury, Wallingford
		Part in Bridgeport SMSA	<i>Milford city</i>
		Part in Meriden SMSA	<i>Meriden city</i>
		Part in New Haven SMSA	<i>New Haven city</i> , <i>West Haven city</i> , Bethany, Branford, East Haven, Guilford, Hamden, North Branford, North Haven, Orange, Woodbridge
		Part in Waterbury SMSA	<i>Waterbury city</i> , Beacon Falls, Cheshire, Middlebury, Naugatuck borough, Prospect, Wolcott
	New London	Part unspecified	New Haven County, not further specified
		Nonmetropolitan part	Bozrah, Colchester, Franklin, Lebanon, Lyme, North Stonington, Salem, Voluntown
		Part in New London-Groton-Norwich SMSA	<i>Groton</i> , <i>New London city</i> , <i>Norwich city</i> , East Lyme, Griswold, Ledyard, Lisbon, Montville, Old Lyme, Preston, Sprague, Stonington, Waterford
		Part unspecified	New London County, not further specified
	Tolland	Nonmetropolitan part	Columbia, Hebron, Mansfield, Stafford, Tolland, Union, Willington
		Part in Hartford SMSA	Andover, Bolton, Coventry, Ellington, Vernon
		Part in Springfield-Chicopee-Holyoke SMSA	Somers
		Part unspecified	Tolland County, not further specified
		Nonmetropolitan part	Durham, Greene, Leeds, Livermore, Livermore Falls, Mechanic Falls, Minot, Poland, Turner, Wales, Webster
Maine	Androscoggin	Part in Lewiston-Auburn SMSA	<i>Auburn city</i> , <i>Lewiston city</i> , Lisbon
		Part unspecified	Androscoggin County, not further specified
		Nonmetropolitan part
